## AMENDMENTS

## **Listing of Claims:**

The following listing of claims replaces all previous listings or versions thereof:

- (Currently amended) An isolated and purified nucleic acid molecule encoding an infectious GBV-C, wherein the nucleic acid molecule encodes SEQ ID NO:20, or a variant thereof, wherein said variant is 99% identical to SEQ ID NO:20.
- (Original) The isolated and purified nucleic acid molecule of claim 1, wherein the nucleic acid molecule encodes SEQ ID NO:20.
- (Original) The isolated and purified nucleic acid molecule of claim 1, wherein the nucleic acid is RNA.
- (Original) The isolated and purified nucleic acid molecule of claim 1, wherein the nucleic acid is DNA.
- (Original) The nucleic acid molecule of claim 1, further comprising a heterologous nucleic acid sequence.
- (Original) The nucleic acid molecule of claim 5, wherein the heterologous nucleic acid sequence encodes a polypeptide.
- (Original) The nucleic acid molecule of claim 6, wherein the polypeptide is a mammalian polypeptide.
- (Original) The nucleic acid molecule of claim 1, further comprising a heterologous promoter.

- (Currently amended) An isolated and purified infectious GBV-C comprising a nucleic acid that encodes SEQ ID NO:20 or a variant thereof, wherein said variant is 99% identical to SEQ ID NO:20.
- (Original) The isolated and purified infectious GBV-C of claim 9, wherein the nucleic acid encodes SEO ID NO:20.
- (Currently amended) A host cell comprising a nucleic acid molecule encoding an infectious GBV-C, wherein the nucleic acid molecule encodes SEQ ID NO:20, or a variant thereof, wherein said variant is 99% identical to SEQ ID NO:20.
- (Original) The host cell of claim 11 comprising a nucleic acid molecule that encodes SEQ ID NO:20.
- 13. (Original) The host cell of claim 12, wherein the cell is a mammalian cell.
- 14. (Original) The host cell of claim 13, wherein the cell is a lymphocyte cell.
- 15. (Original) The host cell of claim 14, wherein the cell is CD4+ lymphocyte cell.
- 16. (Withdrawn) A method of inhibiting HIV disease progression in a subject infected with HIV comprising administering to the subject an effective amount of an isolated and purified nucleic acid molecule encoding an infectious GBV-C sequence, wherein the nucleic acid molecule encodes SEQ ID NO:20 or a variant thereof.
- (Withdrawn) The method of claim 16, further comprising administering to the subject AZT or at least one protease inhibitor.
- (Withdrawn) A method of inhibiting HIV disease progression in a subject infected with HIV comprising administering to the subject an effective amount of an isolated and

purified infectious GBV-C comprising a nucleic acid molecule, wherein the nucleic acid molecule encodes SEO ID NO:20 or a variant thereof.

- (Withdrawn) The method of claim 18, further comprising administering to the subject AZT or at least one protease inhibitor.
- 20. (Withdrawn) A method of inhibiting HIV infection in a subject comprising administering to the subject an effective amount of an isolated and purified nucleic acid molecule encoding an infectious GBV-C, wherein the nucleic acid molecule encodes SEQ ID NO:20 or a variant thereof.
- (Withdrawn) A method of inhibiting HIV infection in a CD4+ cell comprising contacting
  the cell with an effective amount of an isolated and purified nucleic acid molecule
  encoding an infectious GBV-C, wherein the nucleic acid molecule encodes SEQ ID
  NO:20 or a variant thereof.
- 22. (Withdrawn) A method of inhibiting a HIV replication in a cell comprising contacting the cell with an effective amount of an isolated and purified nucleic acid molecule, wherein the nucleic acid molecule encodes SEQ ID NO:20 or a variant thereof, in an amount effective to inhibit HIV replication in the cell.
- 23. (Withdrawn) The method of claim 22, wherein the cell is a CD4+ cell.
- (Withdrawn) The method of claim 22, further comprising contacting the cell with AZT or a protease inhibitor.
- 25. (Withdrawn) The method of claim 22, wherein the cell is in an animal.
- 26. (Withdrawn) The method of claim 23, wherein the animal is a human.

- 27. (Withdrawn) A method of treating a subject infected with HIV comprising administering to a cell of the subject an effective amount of an infectious GBV-C, wherein the GBV-C comprises a nucleic acid sequence encoding SEQ ID NO:20 or a variant thereof, and a heterologous nucleic acid sequence.
- 28. (Withdrawn) A method of expressing a heterologous nucleic acid sequence comprising providing to a cell an isolated and purified nucleic acid construct comprising an infectious GBV-C comprising a nucleic acid molecule, wherein the nucleic acid molecule encodes SEQ ID NO:20 or a variant therefor, and the heterologous nucleic acid sequence.
- (Withdrawn) The method of claim 28, wherein the heterologous nucleic acid sequence encodes a polypeptide.
- 30. (Withdrawn) The method of claim 29, wherein the polypeptide is an antigen.
- 31. (Withdrawn) The method of claim 28, wherein the cell is a mammalian cell.
- 32. (Withdrawn) The method of claim 31, wherein the mammalian cell is in a mammal.
- 33. (Withdrawn) A method of inducing an immune response in a subject comprising administering to the subject an amount of an expression construct comprising a GBV-C nucleic acid sequence, wherein the sequence encodes SEQ ID NO:20 or a variant thereof, and a heterologous nucleic acid sequence operably linked to a promoter, wherein the heterologous nucleic acid sequence encodes a polypeptide, effective to elicit an immune response against the polypeptide.
- (Currently amended) An isolated and purified nucleic acid molecule comprising SEQ ID NO:19-or a variant thereof.
